Aman Trechsel – 19/01/2024

Dear *** ***,

I would like to give you some advice on the tough decision you explained to me about your study decision. Firstly, I would like to let you know that I don't have all the answers, so take my advice with a grain of salt. However, it is good to take a critical look back at the decision you made.

To me it doesn't seem like you regret your decision but more like you're hypothesizing about a potential different outcome. You said that Software Engineering was a safe choice, but Information Technology would be more challenging as you would need to learn a lot of new things. Depending on how certain you are of being capable to take on these new challenges, it could've been a bad decision to go with Information Technology. On the other hand, it could've been really useful to learn about these new things, especially if you are interested in learning. But what is most important is to see if there is anything you regret doing or learning with your current decision. If you do, then choosing Information Technology could have been a great option. But Software Engineering isn't too bad either.

To conclude, it's best not to dwell on this decision as it is irreversible, and to see what you can do with your current decision. While it could have been different, there isn't much you can do about it now apart from making something from it.

Kind regards,

Aman Trechsel
